Working With Me

My process, what's included, and what to expect — Django & Python Full Stack Development

► MY PROCESS

01

Requirements

We confirm scope, data models, auth needs, and integrations before any code is written.

02

Build

API endpoints, database schema, and business logic developed with clean, documented code.

03

Test

Endpoints verified with Postman/automated tests before delivery — no untested code ships.

04

Deploy

Optional Docker containerization and AWS/VPS deployment with CI/CD, if included in your package.

► WHAT'S INCLUDED IN EVERY PROJECT

- ✓ Clean, well-documented source code
- ✓ RESTful API design best practices
- ✓ Basic error handling & validation
- ✓ Postman collection for testing
- ✓ Clear setup / run instructions
- ✓ Responsive communication throughout
- ✓ Revisions per your selected package
- ✓ Support during the delivery window

► TECH STACK

Python

Django

DRF

React.js

PostgreSQL

MongoDB

AWS

Docker

Gemini API / RAG
